

A.C.N. 005 363 833

Revised 30th November 2015

TIGER A BROMINE TABLETS: DISINFECTANT

Tiger A controls the level of disinfectant in your spa.

- (a) Dose rate is one tablet per 1000 Ltrs of water.
- (b) Ideal level is between 2-4 PPM for Tiger A (Bromine).
- (c) Place tablet in small bromine dispenser and tie in front of the jet, alternatively check with spa manufacturer to see if an inbuilt bromine dispenser is present.
- (d) Usage will depend on bather load, temperature of spa and how much dirt may get into spa.
- (e) If the spa is run below 25°C the tablet will dissolve slowly – extra tablets may be required and an increase in filtration may be required. If the spa is run above 34°C the tablets dissolve too quickly and the bromine level will be difficult to maintain.

BINGO B - WATER BALANCER AND CORROSION INHIBITOR

Bingo B controls pH and Total Alkalinity and is responsible for balancing the water and providing protection for your heater.

- (a) Starting up spa for the first time – starting dose rate based on 1200 Ltr = * 400 gm
- (b) Ideal levels for pH are 7.2 – 8.0 and for Total Alkalinity 150- 200 PPM.
- (c) Recommend that 10% of water is taken out of the spa weekly and fresh water added. Top up dose of Bingo B is (20% of start-up dose). Eg 1200 Ltrs = 80 gm.
- (d) Bingo B dose should be dissolved in a bucket of water and thoroughly dissolved before adding to spa with filter running.

PERSOX 980 - SHOCK DOSE

Persox 980 is only added to spa to prevent it going “off” after heavy use.

- (a) Dose rate is 20 gm/1000 Ltrs broadcast over the top of the spa water and filter for 1 hour.

FILTER CARTRIDGE

- (a) Filter cartridge can be cleaned with Poolkare Wuncer Cartridge Cleaner – add 150 gm of Wuncer to a plastic bucket of warm to hot water soak for 1-2 hours. Hose thoroughly before putting back in filter. (½ - 1 cup of White King can be used – ensure rinsed well before placing back in spa)
- (b) Filter cartridges should be cleaned every 2 weeks. More frequent cleaning may be required if spa is used heavily.

GENERAL MAINTENANCE and INFORMATION

- (c) Increase filtration during winter to compensate for colder water – an extra tablet of Tiger A may need to be added.
- (d) Shelf Life of Bingo B and Tiger A if stored in air tight drums is 12 months plus.
- (e) Always read safety directions and instructions for use before commencing any chemical additions.

NOTE: *1 LID = 100 GM
