

A.C.N. 005 363 833

Revised 30th November 2015
6th February 2007.

Winterising Pools what does this mean?

Winterising the pool with Zed Zed 60 means that your swimming pool remains clear over the Winter period with minimal chemical, labour and electrical costs.

A traditional method of cleaning the pool after winter months involves one or both the two options listed below.

Option One:-

Drain pool.
Scrub walls and pressure wash
Refill and chlorinate to regulations.

Option Two:-

Shock and Floc after winter:-
Add chlorine to pool as chlorine must be >6 ppm to kill algae
Add flocculant
Vacuum to waste all dead algae and particles.

Disadvantages of Options One and Two:-

- Waste water.
- Use excessive chemical – raises the cost of chemicals used.
- Increase hours and labour of pool operator.

Advantages of Winterising with Zed Zed 60:-

- Water does not need to be drained therefore pool levels of pH, Chlorine, Alkalinity, Cyanuric acid and Calcium hardness would not be lost.
- Reduce additional chemical usage required to start-up pool after winter.
- Reduce labour and water usage by NOT vacuuming to waste dead algae.

Chemicals for Winterising Pool:-

Add Zed Zed 60 according to recommended dose rate. Example rates based on 50M³

Clean Pool use Zed Zed 60:-

Start up dose of 800ml
Monthly dose of 400ml

Existing Algae problems use Zed Zed 60:-

Start up dose of 1.6 ltr
7 day dose of 400ml
Monthly dose of 400ml

A.C.N. 005 363 833

Additional Chemicals:-

Salt Pools

- Ensure your chlorinator is running in good working order and that your pool has required amount of salt.

Manual Chlorine Pools

- Ensure your chlorine levels are maintained with Calcium hypochlorite or Sodium hypochlorite.

Equipment for Winterising:-

- Ensure Chlorinator cell is reduced from Summer mode to Winter mode or turned down to ensure you do not over chlorinate pool.
- Reduce filtration pump run time to four hours per day.
- Reduce solar pump run time if it is on a timer of eight hours. It is ideal to still run solar pump through Winter so no algae builds up for six - eight hours per week.
- If you have a pool blanket - place on pool.

Note:-

- Note a Shock and Floc program is recommended on the start up of a commercial facility.
- Zed Zed 60 will eliminate algae problems not bacterial problems.
- Check Free Chlorine, pH and Alkalinity weekly via test strip method or test kit.
- Water Balance can also be checked by Wobelea Pty Ltd as per normal pool water test reports.
